

LIQUID CRYSTAL DISPLAY

FACTORY FIT

Because it is a Honda Genuine Accessory, you can be assured that when you purchase a Honda Remote Engine Starter System, it is properly designed to fit your Honda with pre-wiring and electrical systems that operate together.

Most aftermarket systems require cutting and soldering of wires, disabling your electronic immobilizer system and leaving your vehicle unprotected.

Caution: Never start your vehicle in an enclosed area as this may cause carbon monoxide build-up.

WARRANTY

Every Honda Accessory carries a full 3-year/36,000 mile warranty when installed at the time you purchase your new Honda vehicle.

GET STARTED. EASILY.

The Honda Remote Engine Starter System

The New Honda Remote Engine Starter System is designed to provide convenience for Honda owners living in cold or hot climate conditions.

REMOTE ENGINE STARTER SYSTEM

When you purchase the factory Honda Remote Engine Starter System, you also get the intelligent design and safety features you come to expect from Honda:

- Two-way remote system that lets you know your vehicle's status.
- A maximum of 10 or 20 minute starts with the remote in order to prevent carbon monoxide build-up.
- Pre-wired and designed to interface with your vehicle. No cutting wires.
- Retains your electronic immobilizer and security system – a 200 ft. range.
- Command Button to prevent accidental engine starts/stop.
- Automatically activates vehicle climate control and defroster. (Applies to vehicles with Automatic Climate Control. See your Owner's Manual.)

CONVENIENCE AND SAFETY

With the Honda Remote Engine Starter System, you can start your Honda knowing that it is protected at all times while your engine is warming up. All security and immobilizer systems are intact to ensure protection.

A comprehensive check is done before the engine can be started from your remote. This can't be said with aftermarket products.

In hot or cold weather, the Honda Remote Engine Starter System provides the power in your hand to warm-up your vehicle in the winter, or cool it down in the summer.

HOW DOES IT WORK?

The remote emits a signal to the receiver unit installed in your Honda, which commands the vehicle system to start and stop the engine. This is all done with the press of two buttons on the remote.

REMOTE CONTROL RANGE

The remote has an effective range of 200 feet. There are several factors that affect and reduce the remote control range. Possible factors are:

- Distance to buildings and automobiles
- Proximity to high-power transmitters (TV, radio, cell phone, etc)
- A weak battery

REMOTE

Liquid Crystal Display – Communicates the vehicle's status.

Superior Range – Up to 200 ft. with the vehicle and remote.

Long Lasting Lithium Battery – provides more reliability. A low battery indicator icon warns you when it's time to replace the battery.
